

# Script-Controlled ACL – Restrict Record Access Based on Field Value

**Naan Mudhalvan / Skill Wallet Project - Project Planning Phase Document**

## 1. Project & Team Information

- Project Title: Script-Controlled ACL – Restrict Record Access Based on Field Value
- Phase: Project Planning Phase
- Team ID: SWTID-2026-9611
- Team Leader: Adhsa Rani P
- Team Members: Gayathri A, Parkavi P, Priyadharshini M, Chinthanika P
- Platform: ServiceNow / SkillWallet (SmartBridge)

## 2. Project Goals & Key Deliverables

- Project Objective: Establish a structured execution plan to design, configure, test, and deploy script-controlled Access Control Lists (ACLs) in ServiceNow for dynamic row-level data security.
- Key Deliverables:
  1. Requirement Analysis & Traceability Document
  2. System Architecture & Technical Design Document
  3. Configured ServiceNow Update Set (ACL definitions for READ, WRITE, CREATE, DELETE operations)
  4. Test Execution & Verification Report
  5. Project Final Summary Report & SkillWallet Submission

## 3. Work Breakdown Structure (WBS)

- Phase 1: Requirements Gathering & Analysis
- Phase 2: System Architecture & Technical Design
- Phase 3: Configuration & Script Development
- Phase 4: Testing & Quality Assurance
- Phase 5: Documentation & Final Submission

## 4. Schedule & Timeline

- Milestone 1: Project Initiation (Week 1)
- Milestone 2: Requirement Analysis (Week 1-2)
- Milestone 3: Design Phase (Week 2-3)

- Milestone 4: Development & Configuration (Week 3-4)
- Milestone 5: Testing & QA (Week 4-5)
- Milestone 6: Submission (Week 5)

## 5. RACI Matrix & Resource Allocation

- Adhsa Rani P (Leader): Accountable for overall project execution, submission, and governance.
- Gayathri A & Parkavi P: Responsible for requirements and technical design.
- Priyadharshini M: Responsible for ACL scripting and ServiceNow configuration.
- Chinthanika P: Responsible for test cases execution and quality assurance.

## 6. Risk Management Plan

- **Risk 1:** ACL script performance impact on list view rendering -> **Mitigation:** Avoid **GlideRecord** queries inside ACL scripts; rely on inline **current** object and session properties.
- **Risk 2:** Incorrect role mapping allowing unauthorized access -> **Mitigation:** Default to deny-access in fallback script logic.
